

VALERIYA CHERNIAVSKAYA

WEB DEVELOPER

■ ABOUT ME Date of Birth. 14.06.1996

I have been creating websites for about two years. I have a comfortable proficiency in HTML, CSS, JavaScript (jQuery), understanding of HTML semantics, BEM methodology, and CSS styles. I work with CSS Grid and Flexbox. I create adaptive cross-browser web pages. I use CSS preprocessors, as well as the Gulp build tool. I have projects using the Tailwind CSS framework. I am also involved in creating turnkey website solutions (purchasing hosting/domain, installing on the WordPress CMS platform), and working with PHP hooks. I have independently found information and solidified it through practice without the help of advertised IT courses. I have a portfolio of my works, as well as freelance experience in developing HTML/CSS pages for clients. I strive for continuous professional growth in the field of web development. My goal is to actively develop in the field of front-end development.
